

 **ROCKCRUSHER**

ROCKCRUSHER

ROCKCRUSHER HD SERIES

EXPERIENCE

With over 35 years of experience in the crushing industry, ROCKCRUSHER is the technology leader in the market. This application knowledge, together with robust engineering and a focus on quality, guarantees the highest performance and product durability.

KEY ADVANTAGES

Quattro Movement

The unique Quattro Movement produces a consistent cubical shaped material that is suitable for use as aggregate. With the unique crushing movement, the ROCKCRUSHER guarantees higher throughput, increased cubical shaped end product, limited flakes and fines and reduced wear on the jaw plates.

Reverse Function

The Reverse Function enables jammed material to be ejected at the flick of a switch. The ROCKCRUSHER guarantees crushing with no interruption!

THAT ROCKS!

NEWEST TECHNOLOGIES

- Reverse Function efficiently removes jammed material
- Quattro Movement unique movement enables a cubical shaped output

HIGH DURABILITY

- Most robust design on the market
- Replaceable wear parts

THE BEST PRICE-PERFORMANCE RATIO

- Low investment - ideal for start-ups or small operations
- Low operation costs - \$1 USD / crushed ton
- More tons per hour through XXL jaw plates
- Increased revenue through cubical material
- Only one operator and one excavator needed
- No disposal cost
- No transportation of material

MATERIALS

APPLICATIONS

- Demolition
- Quarrying
- Infrastructure / Road construction
- Excavation
- Recycling
- Natural stone processing

MATERIALS

- Concrete
- Asphalt
- Glass and ceramic
- Natural Rock
- Brick
- Mixed inert material

EXCAVATOR SIZE

Excavator in t / lbs

Rockcrusher (HBC)

≥ 12 / 24,000 +	RC 7 R (650)
≥ 20 / 40,000 +	RC 9 R (750)
≥ 25 / 50,000 +	RC 11 R (950)
≥ 35 / 70,000 +	RC 13 R (1250)

CUBICAL SHAPED AGGREGATE

The **ROCKCRUSHER** allows unrivaled throughput capacity with minimal wear, as well as a consistent, cubical shaped output material.

APPLICATIONS

DEMOLITION

On-site Crushing

With the ROCKCRUSHER, material can be crushed directly on site. Disposal or transportation costs to stationary crushing plants are avoided. Operation cost is **less than 1 USD per ton** of processed material (including fuel and maintenance costs).

- On-site crushing
- No disposal or Transportation costs
- Reusable backfill material

EXCAVATION

Reusable Backfill Material

The onsite crushed material can be used for backfill without further processing. The cubical shaped aggregate will solidify the soil with less risk of unwanted bumps or sinkholes.

- Cubical shaped material
- Low investment
- Low operation costs

QUARRYING

Remarkable Throughput Capacity

Thanks to the unrivaled XXL jaw plates and the Quattro Movement, the ROCKCRUSHER can offer very high throughput capacity. Especially for smaller enterprises and startups, the ROCKCRUSHER offers a cost effective solution.

- On-site crushing
- Works in tighter spaces
- Reusable backfill material

- Mobile and flexible
- Low investment
- Crushed material with minimal Fines and flaky material

Less Regulation

Materials can be crushed and recycled right on site, usually without the need for special permits. With its operating cost of less than 1 USD per ton, smaller projects become viable with the ROCKCRUSHER.

RECYCLING

- Working along the track
- Resusable backfill material
- Work in restricted areas

Mobile Projects

In road and infrastructure construction the ROCKCRUSHER saves operation and investment costs. Cost of purchasing additional materials can be saved by re-using the crushed material on site.

INFRASTRUCTURE

- Low investment
- Cubical shaped aggregate
- Output with minimal fines and flaky material

Consistent Aggregate Size

In natural rock processing, the consistency of the size and shape of the output is paramount. With the ROCKCRUSHER a cubical shaped output can be achieved - with very little fines and flaky material. Because of these characteristics, the processed material can be resold or re-used on site.

NATURAL ROCK

ADVANTAGES

TECHNOLOGICAL ADVANTAGES

Designed for durability and ease of service. The ROCKCRUSHER's Central Lubrication System and replaceable wear parts significantly reduce time-intensive maintenance.

DOUBLE SPRING

ROCKCRUSHER's double spring system reduces the potential for spring malfunction while stabilizing the toggle plate and buffering the movement of the jaw plates.

WEAR PLATES

ROCKCRUSHER has replaceable cheek plates to help avoid wear on the frame structure.

ROBUST JAWSTOCK

Casted in one piece, the jawstock provides a robust base for the crusher, ensuring mechanical resilience and stability.

OPTIONS

Each Rockcrusher has optional accessory equipment:

WATER SPRAY BAR

Integrated spraying system for dust suppression.

CAMERA

Camera and monitor for live monitoring of the crushing chamber.

MAGNET

For sorting metals after crushing mixed material such as reinforced concrete.

TECHNICAL SPECIFICATIONS

Model	RC 7R (HBC 650)	RC 9R (HBC 750)	RC 11R (HBC 950)	RC 13R (HBC1250)
Excavator size in tons	12	20	25	35
Inlet opening inches	26 x 20	30 x 20	38 x 21	49 x 23
Surface size jaw plates in yd ²	0.75	1	1.4	2.0
Gap adjustment min-max in in	0.5 - 4.0	0.5 - 4.0	0.5 - 5.0	0.5 - 5.0
Oil flow in gpm	26	38	53	77
Oil pressure in psi	3190	3190	3190	3190
Weight in lbs	4400	6600	9020	13420
Length in in	76	87	93	101
Width in in	43	48	57	72
Height in in	51	54	55	61

SUPERIOR TECHNOLOGY

QUATTRO MOVEMENT

The unique crushing movement guarantees higher throughput, increased cubical shaped end product, limited flakes and fines, and reduced wear on the jaw plates.

- **Pre-crushing in the upper part of the crushing chamber**
- **High throughput capacity**
- **Less friction = Less wear**
- **30% more cubical shaped output**

The unique way of working:

- The upper part of the crushing chamber enables a pre-crushing of the material. It allows a greater amount of material to be loaded.
- The pre-crushed material pushes down into the middle part of the crushing chamber enabling secondary crushing and an optimal material flow with high throughput capacity.
- The lower part of the crusher shapes the material into a cubical shaped output.

REVERSE CRUSHING FUNCTION

Jammed material is easily ejected by reversing the crusher movement.

- **Crushing with no interruption**
- **No more smashing the bucket against the ground**
- **No extra emptying of the bucket**
- **Increased productivity**
